

# Google Ads API — Tool documentation

*This document follows Google's API Center template. It is a separate application from the Brignole paid-ads token. This token is only for the Biography Library Google Ad Grants account.*

## Company name

---

**Biography Library** (nonprofit association)

- Website: **<https://biographylibrary.org>**
- Internal tool (password-protected, not a public product): **<https://seo.brignole.ch>**
- API contact: **[claudio@brignole.ch](mailto:claudio@brignole.ch)**

## Business model

---

Biography Library is a nonprofit association. We advertise only our own websites with Google Ad Grants. We do not run an agency and we do not manage ads for other organisations.

Websites in scope:

- <https://biographylibrary.org>
- <https://app.biographylibrary.org> (same organisation; ads land on the main site unless we change that later)

A separate commercial activity (Brignole) has its own Google Ads accounts and its own developer token. This token will **not** access those accounts. Grants spend and paid spend are never combined.

The association's public websites must not carry visitor-tracking scripts (no Google Analytics, Tag Manager, or ads pixels on the pages), by statute. Search Console is verified with DNS only. Conversion recording uses a first-party WordPress plugin that stores the Google click id from the landing URL when someone submits a contact form. No Google JavaScript is loaded on the site.

## Tool access / use

---

The tool is **Regia SEO**, a private panel for one operator.

- No public sign-ups. No third-party users. No agency access.
- Reads campaign performance (impressions, clicks, CTR, keywords) once per night.
- Prepares campaign *drafts* in the panel. Live campaigns are created by hand in the Google Ads interface.

- Does **not** create, pause, enable, or mutate campaigns, ads, budgets, or keywords through the API.
- Does upload **click conversions** for form submissions that followed an ad click (gclid), using ConversionUploadService. No CSV is uploaded by hand.
- On first run, the tool may enable auto-tagging and create one conversion action of type UPLOAD\_CLICKS if it is missing. That is the only other write.

We apply for **Basic Access**. The tool is not offered to other advertisers. Required Minimum Functionality does not apply.

## Tool design

---

1. A scheduled job authenticates as a Google Cloud service account invited to the Biography Library manager / Grants client (Standard access, so conversion upload is allowed).
2. Read: GoogleAdsService.Search for campaign, campaign\_budget, keyword\_view, metrics.
3. Write (Grants only): uploadClickConversions with gclid, conversion action, time, and a unique order id. Optional one-time mutateCustomer (auto-tagging) and conversionActions.mutate (create UPLOAD\_CLICKS action).
4. The UI at <https://seo.brignole.ch/publicita/biography-library> reads the database. It never calls mutate on campaigns.

## API services called

---

- **GoogleAdsService.Search** (read)
- **ConversionUploadService** (uploadClickConversions)
- **CustomerService.MutateCustomer** once, auto-tagging only
- **ConversionActionService.Mutate** once, if the upload action does not exist

We do not call CampaignService, AdGroupAdService, or other mutate methods to change ads.

## Google Ads accounts in scope

---

- Manager that owns this token: Biography Library manager (login-customer-id).
- Linked client: Grants account **289-519-5392** (digits: 2895195392).
- Not in scope: Brignole paid account 712-100-7160.

## Tool mockups

---

The tool is not externally accessible. Mock-up of the Grants desk:

**Regia SEO — Ad Grants (Biography Library)**

Google credit, not Brignole money. No Analytics on the website. Conversions from contact forms, uploaded at night.

| Name                  | Status  | Clicks (30 days) | Grant used | Advice                        |
|-----------------------|---------|------------------|------------|-------------------------------|
| Search — oral history | ENABLED | 80               | quota      | CTR above five percent. Keep. |

Conversions: waiting 0, uploaded 2, errors 0. Last upload: 8 September 2026. Do not install Analytics. Do not upload a CSV.

Date: 9 September 2026
